## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 9-11, 21, 25 and 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Felder (Fig. 1).

Felder (Fig. 1) discloses an amplifier circuit comprising a first operational amplifier (12) having a first non-inverting input terminal (+ input terminal of 12) and a first inverting input terminal (- input terminal of 12) and a first output terminal (output of 12) and wherein the first output terminal (output of 12) is coupled with the first inverting input terminal (- input terminal of 12) via a first resistor (18), a second operational amplifier (14) having a second non-inverting input terminal (+ input terminal of 14) and a second inverting input terminal (- input terminal of 14) and a second output terminal (output of 14) and wherein the second output terminal (output of 14) is coupled with the second inverting input terminal (- input terminal of 14) via a second resistor (20) and the first (- input terminal of 12) and second (- input terminal of 14) inverting inputs are coupled via a third resistor (R1) and a fourth resistor (R2) coupled in series, and a direct

current source (16) having a current output terminal (output of 16) coupled with and between the third (R1) and fourth (R2) resistors.

***Allowable Subject Matter***

Claims 5-8, 12-20, 22-24, 27 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Patent numbers (3,875,523; 4,162,456) are the differential amplifiers with the dc sources.
